

**SYSTEM, METHOD AND SOFTWARE APPLICATION
FOR SECURE COMMUNICATION**

ABSTRACT

5 The present invention relates generally to systems, methods and software applications for securely transmitting information. More particularly, the present invention relates to providing a system, method and software application for securely transmitting information using multiple transmission methods. An exemplary method of the present invention comprises the steps of: providing data for transmission to a
10 recipient; selecting and addressing a first set of data for transmission to said recipient via a first transmission method, and selecting and addressing a second of data for transmission to said recipient via a second transmission method.
